<Explanation>

The inventions described in claims 1-26 do not appear to involve an inventive step in view of documents 1-9 referred to in the ISR.

Documents 1-3 describe a genetically modified antibody or its fragment bonded specifically to an extra-cellular region of human CC chemokine receptor 4 (CCR4), and describe its use as a curative medicine of blood cancers such as of leukemia and lymphoma.

Also, as described in documents 4-9, chemotherapy drugs such as G-CSF, interferon- α , cytokines like IL-2, vincristine, cyclophosphamide, etoposide and methotrexate are used generally as anti-tumor cures against tumors of hematopoietic organs, and anti-tumor drugs are generally medicated in concomitant use of multiple compositions.

In connection with medical supplies, it is generally practiced for a person skilled in the art to select and determine, as required, kinds of antibodies and combined drugs depending on the purpose, and it is found that a person skilled in the art can easily combine other drugs which contain a genetically modified antibody and its fragment bonded specifically to the extra-cellular region of a human CC chemokine receptor (CCR4) as described in documents 1-3, and further can conceive an invention by identifying antibodies and combined drugs to be specifically used.
